The backcountry contains coastal sage scrub, grassland, and riparian and sycamore oak woodland.

There are 32 campsites in three campgrounds: Lower Moro, Upper Moro and Deer Canyon. Each campsite contains a picnic table and each campground has a composting toilet. Horse camping is allowed in Deer Canyon. Registration and water are available at the Ranger Station. Reservations may be made through Mistix or at the Ranger Station.

Public Use regulations:
- No fires or smoking. Propane stoves okay
- No dogs
- No hunting
- All animals, geological and archaeological sites, plants are carefully protected.
- Stay on trails
- Pack it in. Pack it out.

Poison Oak has leaves of three, so let it be. This is one way to prevent handling poison oak.
But, the best way to avoid this plant is to stay on the marked trails.

The leaves are green until fall, when they turn various shades of red and orange. Do not touch the leaves or stem because the plant is toxic to humans and may cause a rash or blisters.

In California, Lyme Disease is carried by the western black-legged tick (Ixodes pacificus) is the carrier of the bacterium that causes Lyme disease. The tick is most active in the winter months from November through May. Only 1% of the black-legged ticks carry Lyme disease and it is not transmitted within the first several hours after embedding itself.

Signs and symptoms of Lyme disease include fever, malaise, headaches and a circular rash (2-3 days later) all of which may come or go. Later, arthritis-like symptoms and partial paralysis may occur. Contact your physician for more information.

Weather: At certain times of the year, trails may be closed due to landslides, rain, or rain damage. Please check with the ranger for the latest trail information.
